Textbook of Medical Record Linkage
Edited by J. Baldwin, E. D. Acheson, and W. Graham
A description of the techniques, the wide variety of applications, and the future possibilities for record linkage.
0 19 261319 7, 375 pp., illus., October 1986 £30

The Geography of Non-Infectious Diseases
M. S. R. Hutt and D. P. Burkitt
The authors of this book survey the global distribution of non-infective diseases and emphasize the importance of geographical studies in our understanding of disease causation and, therefore, the adoption of preventive strategies.
0 19 261597 1, 184 pp., illus., July 1986 £20
0 19 261451 7, paperback £12.50

Clinical Dermatology
An illustrated textbook
Second edition
Rona M. Mackie
‘Contains many excellent colour photographs, so for most readers the additional purchase of a dermatological atlas will be unnecessary... It is tightly packed with information about all the common and many of the less common skin diseases.’ The Lancet (on the first edition)
0 19 261582 3, 344 pp., illus., July 1986, paperback £12.50

IC-PROCESS-PC
(International Classification of Process in Primary Care)
WONCA (World Organization of National Colleges, Academies, and Academic Associations of General Practitioners/Family Physicians) in collaboration with the Classification Committee of NAPCRG (North American Primary Care Research Group)
A new classification which, in concert with the International Classification of Health Problems in Primary Care (ICHPPC), describes and measures the process of primary care.
0 19 261580 7, 60 pp., July 1986, paperback £8.50

Kidney Disease: The Facts
Second edition
Stewart Cameron
This book describes the variety of kidney disorders, both mild and potentially fatal. This second edition has been completely revised to take account of progress and changes over the last 5 years.
0 19 261594 7, 272 pp., illus., August 1986 £9.50
Notes for Contributors

*Family Practice* is intended to be read by those practising, teaching and researching in the fields of family medicine, general practice and primary care both in developed and developing countries. Priority will be given to material containing evidence of valid measurement and critical interpretation of data, but the wider implications and originality of ideas expressed and discussed is as important. The Journal aims to be inter-disciplinary and contributions from other disciplines of medicine and social science will be welcomed.

**Preparation of the Manuscript**

Papers should be typewritten on one side of the paper only, double-spaced and with ample margins. The top copy should be accompanied by two others. In addition to the full title of the paper, authors should supply a ‘running title’ which will appear at the heads of pages. Authors should note that papers may be subject to editing.

Articles should be 2500/3000 words in extent, with tables usually not exceeding five and references normally not exceeding ten. Authors should supply a summary of 100-200 words suitable for use as an abstract. Letters will be welcomed and should normally be short and certainly not exceed 500 words.

Comments on published papers will also be welcomed; these should not exceed 300 words and should be posted as soon as possible after the relevant article has appeared, to allow the author the opportunity to reply before the next publication.

Review articles will also be accepted, approximately 5000 words in extent with no limit on the number of references.

Short reports of up to 700 words should have no more than one table and five references.

**References**

References should be in the Vancouver style, in the order made in the text and numbered accordingly. These numbers should be inserted above the line on each occasion a reference is cited (confirmed by other studies). Numbered references should appear at the end of the article and should consist of the surnames and initials of all authors when six or less, when seven or more list first three and add et al, title of article, name of journal abbreviated according to *Index Medicus* style, year, volume, first and last page numbers, e.g.

For books, names and initials of all authors, the full title, place of publication, publisher, year of publication and page number should be given.

All measures should be reported in SI units followed, in the text, by traditional units in parentheses. For general guidance on the International System of Units and some useful conversion factors, see ‘The SI for the Health Professions’ (WHO, 1977). There are two exceptions: blood pressure should be expressed in mm Hg and haemoglobin as g dl$^{-1}$.

**Illustrations and Tables**

Illustrations and tables must be cited in order in the text and have a title and be as simple as possible.

**Copyright**

Acceptance of a paper will imply assignment of copyright by its author to the Oxford University Press (unless otherwise indicated) but the author will be free to use his material in subsequent publications written or edited by himself provided that acknowledgement is made of *Family Practice* as the place of original publication.

**Offprints**

The author will receive 25 offprints of his article free of charge with an option to buy further copies at reasonable prices.

**Delivery of Manuscript**

A letter of submission should accompany the paper indicating to whom and where all correspondence concerning it should be addressed. It should be sent to the Editor, J. G. R. Howie Professor of General Practice University of Edinburgh 20 West Richmond Street Edinburgh EH8 9DX
